

## HoloPresenter

TRANSPARENT INFORMATION

Dynamic information guaranteed to attract attention.

The **HoloPresenter** is a presentation system with optional controlling software. Its extraordinary design and transparent projection will attract visitors and enable a broad range of applications in zones with a high density of visitors. Videos, animations or combinations of pictures and text will bring offers to life. People who are interested will be addressed actively. Information can be changed dynamically - no matter what day of the week or time of day it is.

Interactive elements enable a targeted search for the most attractive offer.

The **HoloPresenter** uses the unique **HoloPro™** technology. Whether embedded in glass or fixed to existing glass elements as a foil, **HoloPro™** allows projection onto glass, even in daylight.

The **HoloPresenter** becomes a basic component of the light and space concept. Lively information areas will be created that structure the room without disturbing its transparency and effect.

**HoloPro™**

EYE-CATCHING TRANSPARENCY

## The magic of transparency

Floating pictures that generate an atmosphere

Floating pictures that communicate information with airy lightness: **HoloPresenter** with advertising space.

### Fields of application

The **HoloPresenter** is ideal for the entrance area to provide information to visitors about current events, special offers of the day or special promotions. This data can be entered into the system manually, easily and quickly, and there is room for a lot of variations in advertisement formatting. One particular advantage of the optional **HoloPresenter** software is the facility for entering the latest information immediately from the most varied of sources. Depending on load, offers can be faded out or given special emphasis by means of connection to an existing booking system.

- Elegant presentation
- Can be combined with i-PrOS touch technology
- Perfect for use at fair stands
- Small standing area
- Easy to assemble

The **HoloPresenter** consists of a standing glass screen equipped with a **HoloPro™** film in the upper area. The lower area can be used for advertising. The glass screen is supported by an L-shaped piece of metal that the projector is mounted on vertically.

Picture size: 40" diagonal (800 mm x 600mm)  
 Dimensions: 0.90 m x 2.10 m x 0.63 m (W x H x D)

Optional: Projector: NEC LT280 (or other model of equal quality) with 2,500 Ansi Lumen

Software: PADS 3.1 Standalone from  
 Net Display Systems  
 Touch display feature  
 Special shapes  
 Brochure holder
