

HoloTower 67" – Rear Projection system for in- and outdoor applications

Dear Sir/Madam,

We would like to represent to you the newest HoloPro™ product: The HoloTower is a closed rear projection system offering projections which are very bright and rich in contrast in direct sunlight. With these characteristics the HoloTower is a perfect solution as a presentation and communication medium for outdoor applications.

A 67" HoloPro™ screen is integrated in a compact and closed unit having a height of app. 3 m (app. 10 feet). As the projector is fixedly installed in the tower, no additional settings are necessary. Thanks to the closed construction of the assembly that delivers the dark background, images that are most rich in contrast are possible.

The attached photo shows the new HoloTower with a 67" screen. Please note that the photo shows the actual picture quality and not a photomontage! Outdoor projection applications are possible with just 3.000 ANSI-Lumen.

HoloTower 67" rear projection system for "in- and outdoor" - applications
